

**we have
understood...**

The batching unit **REVO** is specially designed for applications in the field of mass production of standard fabrics. The convincing price/performance ratio of this winder, combined with a state-of-the-art drive solution and intuitive operating technology, allows the production of first-class cloth rolls with lowest energy consumption. Extensive standard equipment is included such as:

Softkey-panel with multicolor LED-display

constant winding tension due to modern sensor technology

visual indication of weaving machine running signal

illuminated logics for different modes of operation

adjustable speed limitation

warning light (LED) in case of malfunction

modular architecture, thus suitable for retrofitting of additional options

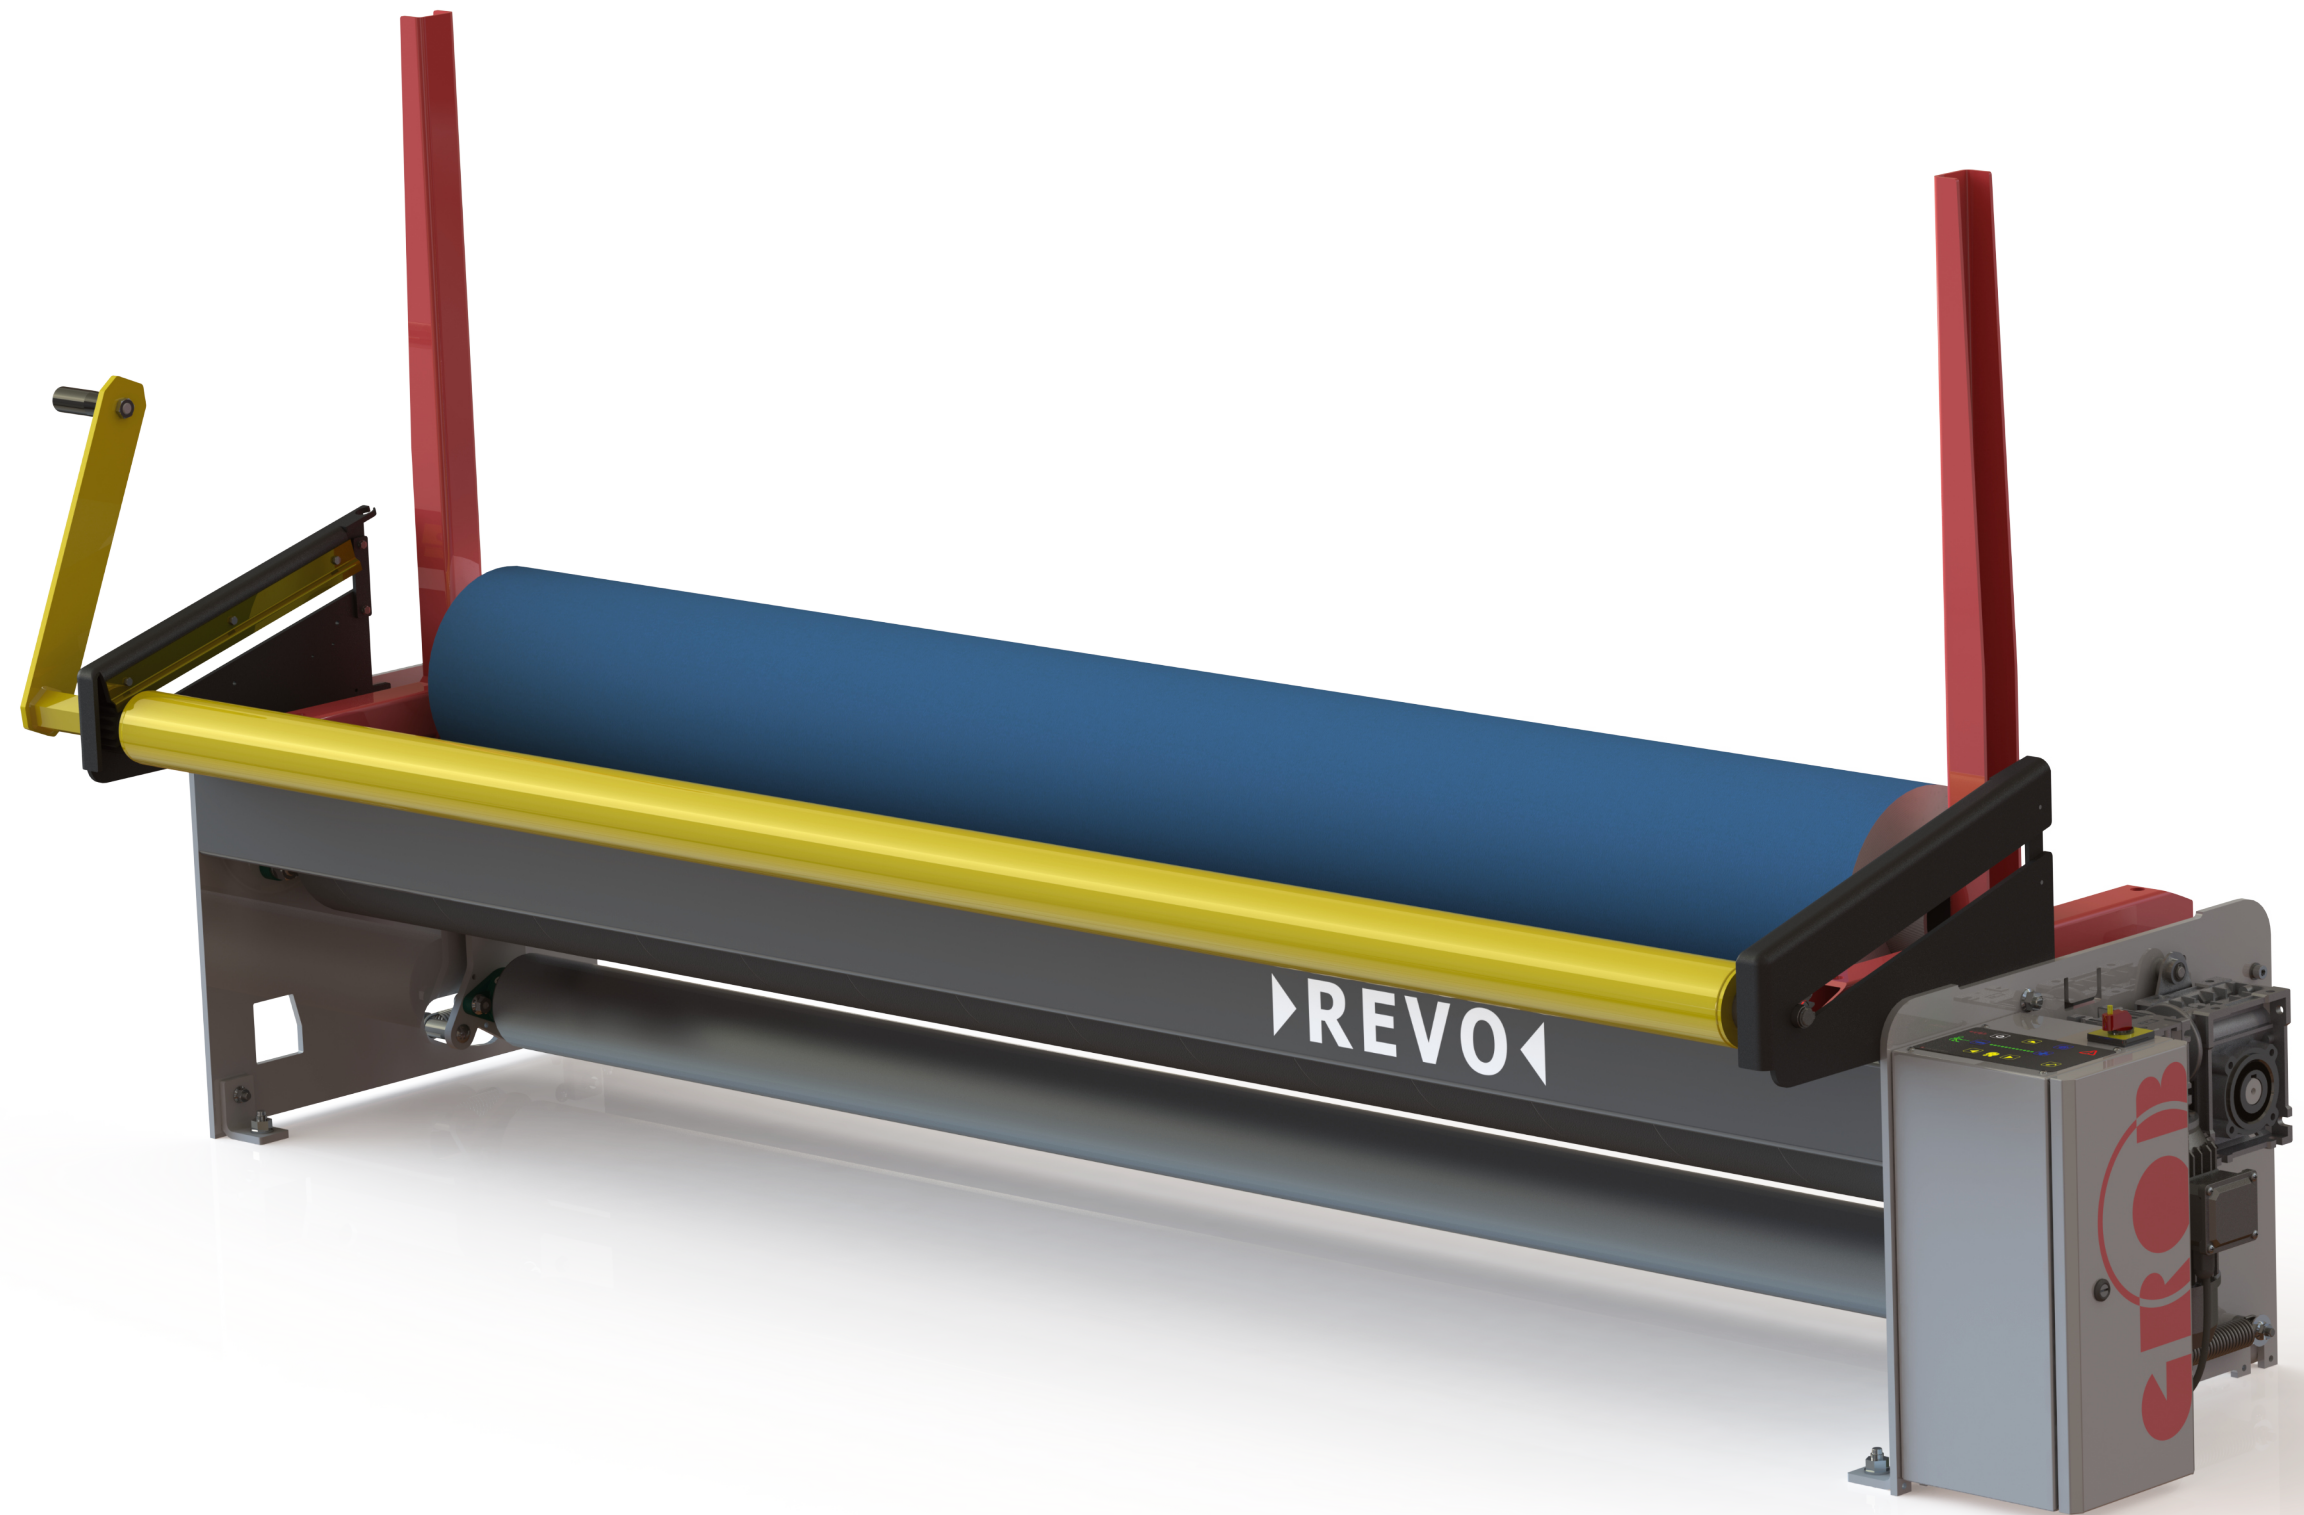

prepared for upgrade to 'Touch-Screen' operation

ready for option 'electrical ejector'

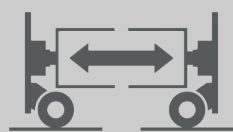

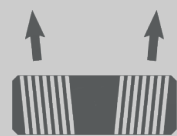

Options:

Ejector

Traverse motion

Spreader system

Touch Screen

Pressing system

Inspection

Color design

**low energy consumption paired
with attractive price**
