

**we have
understood...**

The batching unit **SONEO** combines the latest winding technology with state-of-the-art architecture. Ergonomics in hardware and software are forward-looking and convincing. Our many years of experience, combined with a consistent focus on customer needs, makes this machine the benchmark for innovative winding. Extensive standard equipment is included such as:

high resolution, multilingual 7" display

constant winding tension due to modern sensor technology

automatic speed regulation to match the weaving machine speed

display of fabric length wound, alarm function when piece length is reached

individual access authorization for users profiles

freely definable password management

monitoring of important parameters by USB interface

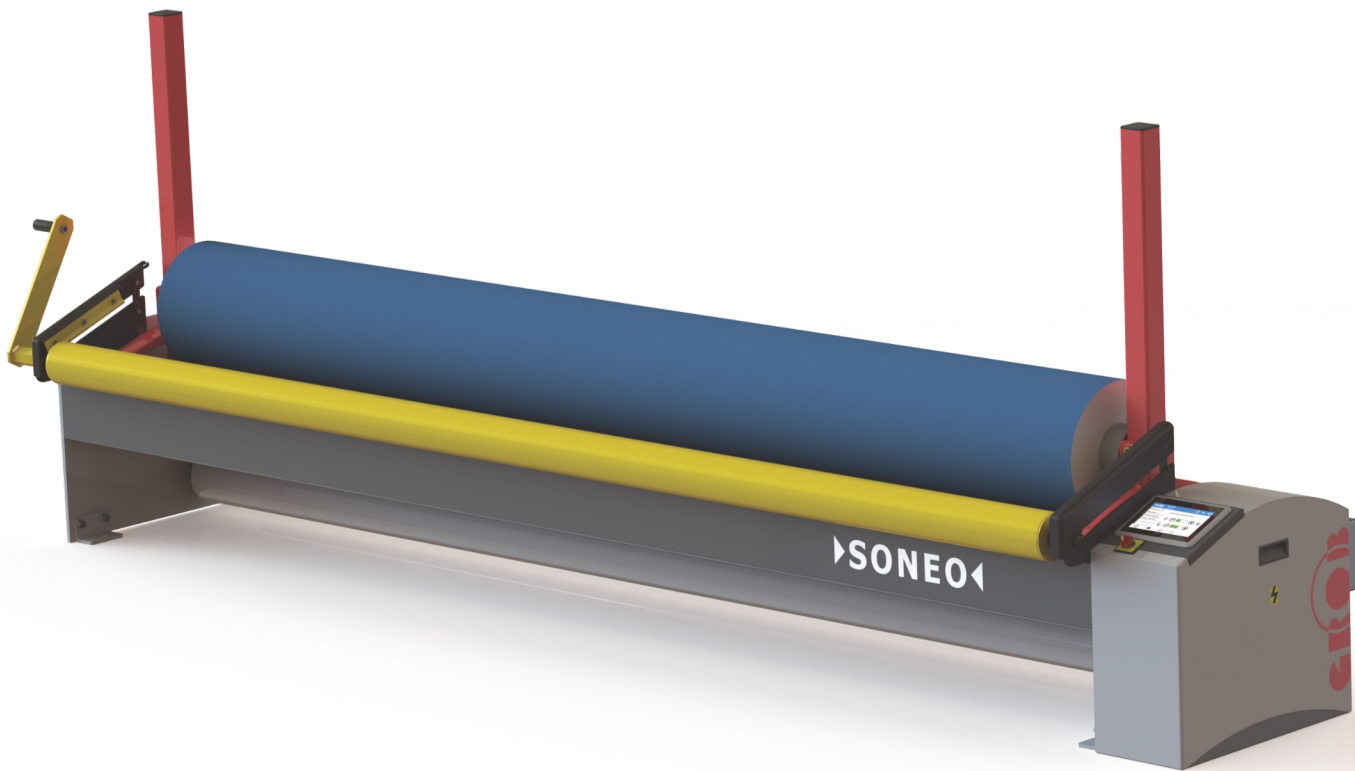

modular architecture, thus suitable for retrofitting of additional options

prepared for integration of OPC-UA (Industry 4.0)

Options:

Ejector

Traverse motion

Spreader system

Curve control

Pressing system

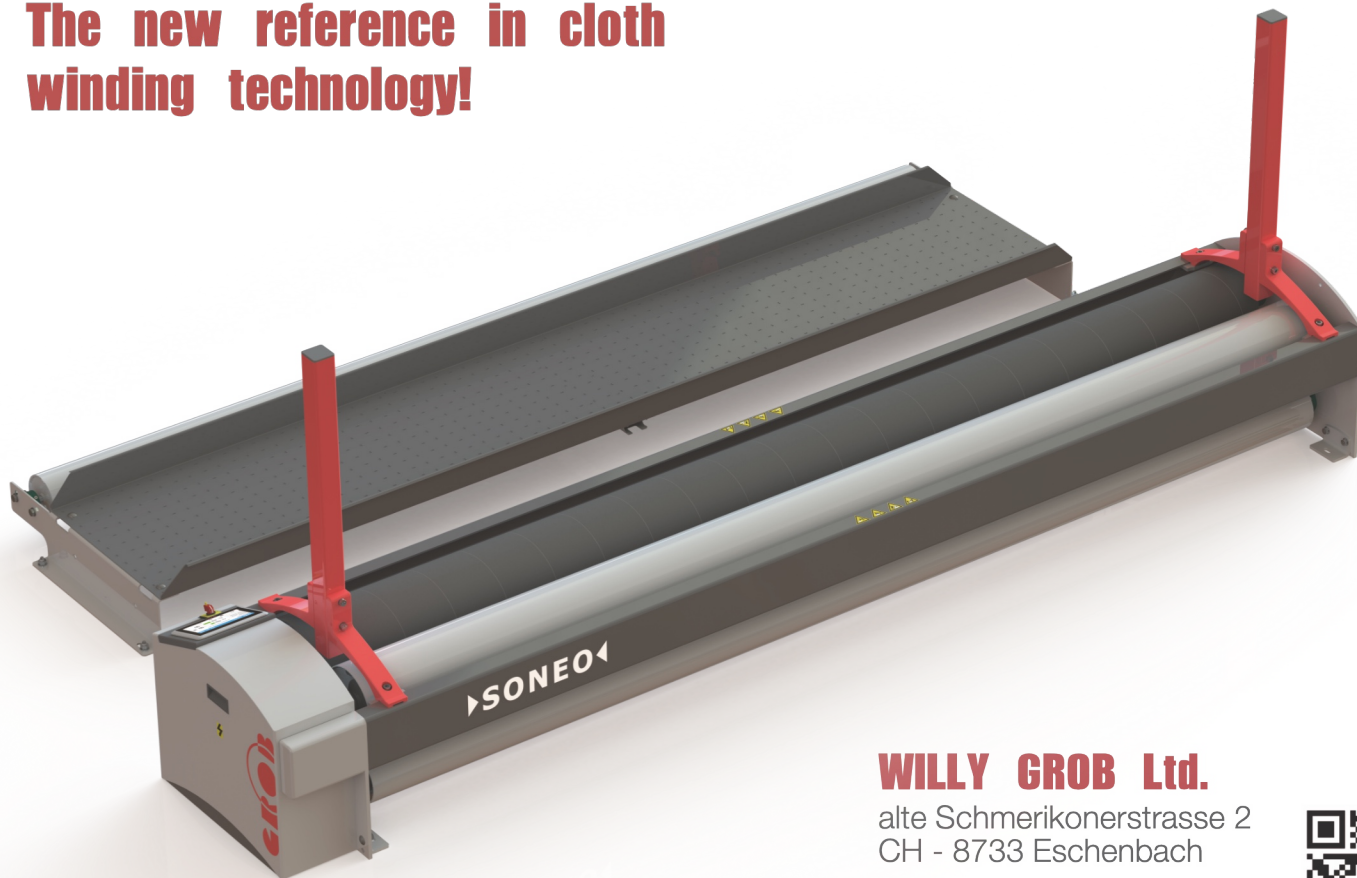

Inspection

Color design

**The new reference in cloth
winding technology!**
